Subject: Re: Final Proj

Dear Sir,

Sorry for the delay in updating you regarding the project.

We were actually planning to email you. Can you tell us a free time slot to have a meeting?

Best Regards,

Dineth Wijayasena.

Paper Title Classification Model to identify airline No-Show rate based on passengers in Sri Lankan context

Track Name Smart Computing

REVIEW QUESTIONS

1. Paper is related to the scope of the conference. (Yes/No)
Yes

2. Comments on relevance of the paper to the scope of the conference.
Authors have developed a ML based applications to predict No-Show passengers.

3. Title of the paper is appropriate. (Yes/No)
No

4. Comments on title of the paper.
What do you mean by "No-Show rate" in the title? Why do you want to include other airline details if this is about Sri Lankan air line?

5. Objectives are clear. (Yes/No)
Yes

7. Originality of the content and scientific merit is satisfactory. (Yes/No)
Yes

9. Research design, methods, analysis of data, interpretation of results and conclusion are satisfactory. (Yes/No)
No

10. Comments on research design, methods, analysis of data, interpretation of results and conclusion.
I have couple of questions about the method followed:
- To predict No-Show passengers use of data collected through a questionnaire is questionable. This prediction hard to do based on opinions others.
- There are no enough details about the dataset.
- It is unclear how the features used for prediction were selected. Without proper evidence or explanation, it becomes difficult to understand the rationale behind choosing these particular features and their relevance to the prediction task.

11. Language and grammar of the paper are satisfactory. (Yes/No)
Yes

12. Comments on language and grammar of the paper.

What do you think?

Paragraph

- Data mining techniques are used to extract valuable information and insights from large datasets. These techniques can include machine learning algorithms, statistical analysis, clustering, association rule mining, and more. Some common techniques include association rule mining, which discovers relationships between variables, and clustering, which groups similar data points. Other techniques include classification, regression, decision trees, neural networks, text mining, time series analysis, anomaly detection, and ensemble methods. These techniques are applied in various fields such as finance, healthcare, marketing, and many more to gain insights and make data-driven decisions. By analyzing large datasets, data mining techniques can reveal patterns and trends that may be difficult to discern through manual analysis, leading to more efficient and effective decision making

Pl find the reviewed paper. I did some corrections upto question 10. Most of the questions belongs to remembering and Understand levels. Q6 is apply level by rest again understanding level. For apply level, Can give a Give a description and ask to apply that to ER model. like in Q6. The last 5 questions can't take as analysis level. For the last 5, you can introduce a scenario and ask questions.

Abstract—Creating high-quality and balanced exams for undergraduates that appeal to varied cognitive capabilities is an essential task. Bloom's taxonomy is a framework used by many university lecturers to accomplish this task and assess student performance. However, the majority of students are unaware of Bloom's Taxonomy and how it influences their learning experience. This lack of knowledge makes students struggle to understand the depth and complexity of a subject they are studying. As many university papers are created based on this framework, it is essential that a student should possess at least a basic knowledge about each level in Bloom's Taxonomy. Therefore, this presents a research problem as it raises questions about how undergraduate students can identify and understand their cognitive level as classified by Bloom's Taxonomy, and how they can develop the skills they need to advance to higher levels. To address this issue, a personalized self-study system can be implemented that guides students through the process of applying Bloom's Taxonomy to their learning. By incorporating Bloom's Taxonomy, students can identify areas where they may need to focus their efforts to achieve their learning goals.

Keywords—component, formatting, style, styling, insert (key words)

I. INTRODUCTION

University students face enormous pressure and stress when it comes to their academics today. Many students find themselves struggling to keep up with a wide range of subjects to cover and a huge number of assignments and exams. Some students do not have enough time to refer to all lectures, some students may not know how to study efficiently in order to achieve good grades. Many students try to do self-study to stay on the correct track. But unfortunately, students don't have a good idea about how to study effectively on their own and how they want to focus on each and every section to obtain higher results. This can lead to poor performance and even more stress. So, students need to be able to develop good self-study habits, but that can be tough to do without help.

II. EASE OF USE

A. Selecting a Template (Heading 2)

First, confirm that you have the correct template for your paper size. This template has been tailored for output on the A4 paper size. If you are using US letter-sized paper, please close this file and download the Microsoft Word, Letter file.

B. Maintaining the Integrity of the Specifications

The template is used to format your paper and style the text. All margins, column widths, line spaces, and text fonts are prescribed; please do not alter them. You may note peculiarities. For example, the head margin in this template measures proportionately more than is customary. This

Table Type Styles

Table Head	Table Column Head	Subhead	Subhead
copy	More table copy		

Fig. 1. Example of a figure caption. (figure caption)

Figure Labels: Use 8 point Times New Roman for Figure labels. Use words rather than symbols or abbreviations when writing Figure axis labels to avoid confusing the reader. As an example, write the quantity "Magnetization," or "Magnetization, M," not just "M." If including units in the label, present them within parentheses. Do not label axes only with units. In the example, write "Magnetization (A/m)" or "Magnetization (A/m(1))" not just "A/m". Do not label axes

Figures and tables after they are cited in the text. Use the abbreviation "Fig. 1", even at the beginning of a sentence.

IV. RESULTS AND DISCUSSION

The preferred spelling of the word "acknowledgment" in America is without an "e" after the "g". Avoid the stilted expression "one of us (R. B. G.) thanks ...". Instead, try "R. B. G. thanks...". Put sponsor acknowledgments in the unnumbered footnote on the first page.

V. CONCLUSION

The preferred spelling of the word "acknowledgment" in America is without an "e" after the "g". Avoid the stilted expression "one of us (R. B. G.) thanks ...". Instead, try "R. B. G. thanks...". Put sponsor acknowledgments in the unnumbered footnote on the first page.
